ACO. creating
the future of drainage

Today, paving stones, pavement slabs or asphalt are the usual surfaces for paving areas around homes as well as large areas around public and commercial buildings. As these usually seal the soil, rainwater and wastewater cannot seep away naturally. In order to prevent puddles from forming, the pavements must not only be laid professionally, but care must also be taken to ensure that surface water is collected and drained away. The ACO Self® XtraPoint point drains are a simple and practical solution.

- Pedestrian zones
- School playgrounds
- Car parking spaces
- Parking areas

- Water standpipes
- Courtyard driveways
- Garage driveways
- Terraces, patios

ACO Self® XtraPoint

The ACO XtraPoint point drain, made of plastic, can be driven over (class B 125) and has a sludge bucket with handle (1.1 litre volume). A new feature is the modified paving edge, which allows direct paving. This is implemented by utilising low level concrete anchors. The gratings can be additionally rotated by 90°. The DN 100 outlet is arranged vertically.

Tip

Excellent joint pattern

The newly designed paving edge enables the precise placement of paving. With the 90° rotating gratings, the cover can be individually adapted to the joint pattern.

does not rust

- Plastic gully body
- durably colourfast

excellent design

- Winner iconic Award 2017: innovative product

ACO Self® XtraPoint with plastic grating
Article: 319430
Dimensions:
250 x 250 x 205 mm

Car traffic capable

Mounting for gratings with load class B 125

optimised installation

- Paving edge
- easy handling

2 stops per grating

4 ways to lock the grating. Grating can be rotated by 90°

4 deep concrete anchors

Minimum drain performance
4,5 l/s

DN 100
